

BARGER STORM SHELTERS

Our reinforced concrete shelters are a cost-effective solution to traditional underground shelters.

The reinforced concrete structure, convenient installation, and ease of access make our shelters the ideal solution for your family.

When severe weather conditions threaten your family, Barger Storm Shelters deliver protection and comfort right in your backyard.

An investment in the safety of your family is the most important one you can make.

Barger Storm Shelters offer the following unique features:

- FEMA 320 standard compliance
- Reinforced 5,000 psi (28 day) concrete structure
- Turbine vent and 6" inlet
- Easy access with handrail and steps

Barger Storm Shelter Specifications

Installation:

Storm shelters are installed by digging a 46" deep, 78" wide by 138" long hole, which allows for a six inch gravel foundation (required for shelter installation). The entire bottom half of the shelter is buried below finished grade. This process is a minimal impact to your yard and provides ease of access for your family during a storm.

Construction details and benefits:

- The structure of the shelter is reinforced by a #3 rebar cage
- Double locking door resistant to 100 mph strike from heavy debris.
- Turbine fan and inlet vent are equipped with intrusion guards to prevent entry of debris.

Contact Barger & Son's today and have confidence that you and your family are protected in severe weather conditions.
